BLM Project Manager
Ryan Amme
PO BOX 12000
Reno, Nevada 89520-0006

Dear Mr. Amme,

1

I am aware of your proposed project to use pesticide in the National Forests Forest and on some National Monuments. I am a 36 year old man who has Chronic Lymes disease and has many serious chemical intolerances to the point of them being life threatening so please do not use Pesticide in Conejos County, Colorado where I am a Colorado Resident and I am reregistered on the State's Pesticide Sensitive Registry. Our State recognizes M.C.S. (Multiple Chemical Sensitivity) in a State Law and has provided the registry for those who suffer from intolerance to pesticide. even used in minute amounts and or its residue. I live May to Oct in the little town of Platoro, Colorado when the seasonal town is open. I have to be isolated from Chemicals to improve my health. I cannot live near Farming so the Forest has been a medical necessity for me. However it is only safe for me as long as I am far away from any chemicals or their residue. Also any pesticide use would be very harmful for the environment in this environmentally sensitive area. Our town is very isolated and deep in the Forest with only one gravel road and it is 23 miles off of the nearest paved state highway.

Please do not use any pesticide in my area .

Please use only alternatives to chemicals on all BLM land. (OPTION C)

Sincerely,

Troy Peterson
